U.O.C. Diagnostica per immagini – Ospedale “Dono Svizzero”
Formia DEA I livello– Asl Latina

58-year-old female

with dyspnea and fever for one week. Medical history: COPD and DCM and severe

heart failure (EF: 25%), obesity.

Chest film:

Diffuse

interstitial markings with alveolar consolidations in the upper lobes. Cardiomegaly.

No pleural effusion.

Since the chest

radiography findings were highly suspicious for interstitial pneumonia, the

radiologist asked for a nasal swab which confirmed a SARS-CoV-2 infection.

The following CT revealed the typical Covid-19 pneumonia features.
